

Cast iron RC

Aluminium RC

Steel alloy RC

Innovations and Specificities

Offline programming

- High flexibility (up to 200 types of casting processed per cell)
- Output from 20 to 100 p/h with one robot
- Automatic tool change
- Robotised cells are equipped with diamond-coated tools

Tasks carried out:

- Loading and unloading by rotary table.
- Cutting of casting sprue systems and feeders.
- Deburring of mating faces and core outlets.
- Grinding of casting gate marks.
