

SiiF has more than 30 years' experience in the design, production and development of ferrous finishing tools (GG or GS, GJ, etc.).

With **more than 1000 cutting tools** supplied to the largest foundries in the world, SiiF can also provide the tooling to meet foundry requirements and tolerances.

- Excellent durability using steels with high wear resistance.
- On SiiF trimming machines the output rate reaches up to 1000 p/h.
- Blades are made out of the highest grade steels for a precise and repeatable finishing. Blade's life goes up to 1 million cuts.
- The original tool design allows for variations in castings (sizes and moulding) by means of "floating" systems and adapted clearances.
